

VPN Setup - MacOS

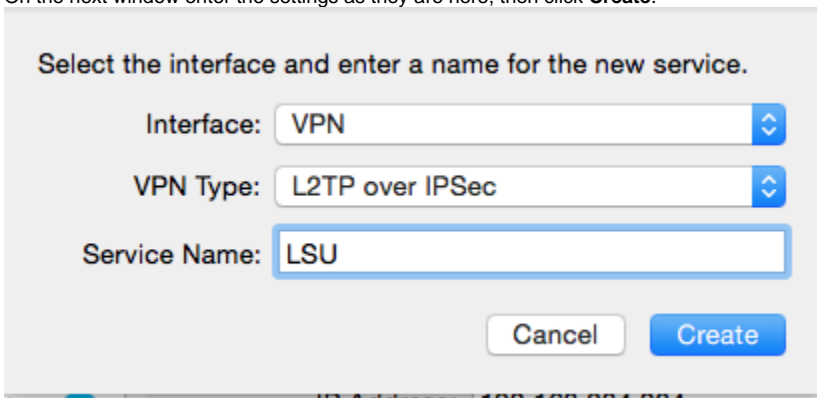

1. Open **System Preferences**, and click **Network**.

2. Click the + button at the bottom of the window to add a new interface. Choose VPN.

3. On the next window enter the settings as they are here, then click **Create**.

4. Select the new network interface and enter the settings as they are below, substituting your account details where applicable.

The screenshot shows a configuration window with the following elements:

- Status: **Not Connected**
- Configuration: **Default** (dropdown menu)
- Server Address: **vpn.lsu.co.uk** (text field)
- Account Name: **lsuoffices\john doe** (text field)
- Encryption: **Automatic (128 bit or 40 bit)** (dropdown menu)
- Buttons: **Authentication Settings...** and **Connect**

5. Click 'Authentication Settings...'
- a. Password = your password
 - b. Machine Authentication, Shared Key - as per the email from Harry Jenkins on the 18th March 2020 (subject: VPN Pre-shared Key)
 - c. Click OK

The screenshot shows the 'User Authentication' dialog box with the following elements:

- User Authentication:**
 - Password: [password field]
 - RSA SecurID
 - Certificate [Select...]
 - Kerberos
 - CryptoCard
- Machine Authentication:**
 - Shared Secret: [pre-shared key field]
 - Certificate [Select...]
- Group Name: [text field] (Optional)
- Buttons: **Cancel** and **OK**

Click **Apply**, then click **Connect**. The VPN connection will then be established.

To disconnect or reconnect the VPN, simply select the interface in the Network section of System Preferences, and click either **Connect** or **Disconnect** depending on the current state of the link.
