

VPN

Use of the VPN has been depreciated in favour of Office 365 ([Outlook Web Access](#)) and WebDAV ([Remote File Access \(WebDAV\)](#)) and is now only available where staff / departments can show a clear business need to access systems from off campus that there is no other way to access. More often than not, the answer is going to be no.

Examples of things available without VPN:

MSL

Email

File access (there are some exceptions)

Examples of things not possible with or without VPN

Remote desktop to PCs

Apple OSX 10.12 - Sierra

With the launch of Sierra (OSX 10.12) Apple have decided that PPTP is no longer to be supported, for your own good, with very little notice. We have now upgraded the VPN so Sierra users can now connect again.
